Prepared for: Perky Planet  
 Date: 1/16/18

At Seattle Coffee Gear (SCG), we provide as much knowledge and information as possible during the sales and setup process. We believe this creates an environment in which each person is prepared, fully informed, and comfortable with the machines they will be purchasing, using, and maintaining. To this end, we strive to ensure that the right equipment has been selected based on each customer's needs, especially within a commercial setting that relies heavily upon the machine.

As part of our partnership, SCG is able to provide some guidance through the installation process, ensuring that your machine is set up and functioning properly before you begin working with it. Since this is a project in and of itself, we have several steps that we will help guide you through. Below you will find some areas to be aware of as you are getting ready and described in further detail below, but will follow these general phases:

- Order Completion
- Site Readiness
- Machine Installation
- Testing and Acceptance
- Warranty and Future Service
- Maintenance

**Order Completion**

When the order is complete, you will receive an email with the order confirmation and, as the order items ship, tracking information will also be provided by email

**Return Policy**

It is important that we help you find the right equipment for your business needs, as we are unable to accept commercial

Brown Bean Distribution  
6911 216th Street SW  
Suite A  
Lynnwood WA 98036  
United States

---

equipment back for return. This includes espresso machines, grinders, drip brewers, and any included items as part of a commercial sale. Please contact us immediately if you feel, at any time prior to shipping, that the equipment purchased will not meet your needs.

Site Readiness (You want to be ready when the service provider arrives)

SCG will provide a pre-installation check sheet. This will assist in preparation prior to the installer's arrival, including ensuring that any electrical outlets, water connections, and drainage outlets are properly configured. This document can be provided to the installer as assurance that the site is ready for the installation to be completed.

The installer will work with you to bill you directly, as necessary.

#### Machine Installation

As coordinated between the installer and you/your site contact, the machine will be: Delivered, assembled as necessary, and connected to the electrical outlet, plumbing, and drainage, as equipped. The machine will then be turned on and, after some heat-up time, demonstrated as working properly. The installer will also demonstrate basic maintenance for the equipment such as back-flushing or purging the steam wand. A typical installation does not normally include dialing in the grinder for your coffee or specifically demonstrate techniques, dosing, or programming for equipment. As with any service these are things that you could discuss adding on. Machines will arrive pre-programmed; if further programming is desired, please review the equipment manual or work with the installer to provide this added service.

Machine Install details: Customer will be responsible for the installation charges and direct communication with the service company. SCG will send a manufacturer recommended service provider name, contact information and introduction, if needed.

#### Test and Acceptance

It is highly recommended to be on site or have a site contact authorized to sign off on the work provided by the installer.

If for any reason the equipment is not acceptable, is damaged or not working as you expect, discuss this directly with the installer. They will work with you to correct the situation and resolve it to your satisfaction. If they are unable to resolve it at that visit, SCG does not recommend signing any final acceptance documents, which would approve the equipment, the installation, and its condition.

#### Warranty

Since the warranty and its inclusions/exclusions will be different for all equipment, below is an outline of the equipment being considered, their warranty lengths, and inclusions. Unless otherwise stated, all warranties begin from the original purchase date, as provided on the order confirmation.

\*SCG must preauthorize any service call or warranty claims for the repair center to go on-site to inspect or repair the issue when labor is covered by SCG. Any warrantied service call needs to be approved by SCG prior to the technician's arrival.

The equipment purchased and their warranty length is as follows:

Rancilio Egre - Two years parts, one year labor  
Rocket Boxer - One year parts, 90 days labor  
Eureka Zenith - One year parts

Bunn products:

Brown Bean Distribution  
6911 216th Street SW  
Suite A  
Lynnwood WA 98036  
United States

---

Airpots, thermal carafes, decanters, GPR servers, iced tea/coffee dispensers, MCP/MCA pod brewers, thermal servers and ThermoFresh servers (mechanical and digital): 1 year parts and 1 year labor  
Electronic circuit and/or control boards: 3 years parts and 3 years labor  
Compressors on refrigeration equipment: 5 years parts and 1 year labor  
Grinding burrs on coffee grinding equipment to grind coffee to meet original factory screen sieve analysis: 4 years parts and 4 years labor -OR- 40,000 pounds of coffee (whichever comes first)  
All other equipment not specified above: 2 years parts and 1 year labor

#### Manufacturer Limited Warranty

Espresso machines, grinders, and/or drip brewers are covered by a limited, commercial-class warranty. Defects or failures in workmanship or materials in the manufacturing process are covered with a replacement of the failed part. It does not cover maintenance or normal wear and tear issues. Refer to the specific manufacturer warranty details.

#### Labor

The time needed to correct or replace the failed component by a service technician is considered labor. This is typically billed in partial or full hour increments. Any pre- authorized labor covered by warranty will be billed to you directly. You are responsible for the bill between you and the repair center.

Your Preauthorization will include a reimbursement form. To attain reimbursement for these costs, SCG must receive: a completed reimbursement form, a copy of the repair center's itemized bill, the technician's notes, and any pictures as requested. Upon approval of this reimbursement and completed forms, we will mail a check to you directly within 5-10 business days. Travel time to the location for the technician/repair center is not included, only the labor to complete the repairs for warranty related issues.

#### Travel Time

Travel time, fuel fees, or other services related to transportation of the technician to the site for repair is not included in the warranty, will be billed directly between you and the repair center, and will not be reimbursed by SCG.

#### Included

The warranty covers any internal mechanical or electrical components (including, but not limited to, control boards, pumps, boilers, wiring, brew groups, hoses or motors) from defect or failure under normal use conditions.

Manufacturers specific warranty details will supersede any warranty details outlined in this document.

#### Excluded

The warranty does not cover any defect or failure arising from:

The misuse of the machine, including but not limited to:

- Improperly filling the boiler/machine during initial start up or brewing processes, resulting in burnt out components
- Damage caused by not meeting and maintaining manufactures' specification for water quality entering equipment
- Lack of regular thorough cleaning of the milk frothing components
- Lack of regular maintenance of the machine's brew group
- Oily bean residue and effects it may have on internal components

It is our recommendation to always choose a coffee that is visibly clear from sheen or an oily coating. It is this oil that can cause coffee back ups, grinder clogs, which can place stress on motors that can cause mechanical issues. Service may be needed to recover. These types of services will not be covered under warranty.

Brown Bean Distribution  
6911 216th Street SW  
Suite A  
Lynnwood WA 98036  
United States

---

Normal wear and tear on the machine, including but not limited to:

- Replacement of gaskets and steam valves
- Scratches, dents, flaking or other surface marring of any components
- Grinder burr replacement (completely dependent on how many lbs of coffee that have run through) Refer to manufacturer warranty on specifics of Grinder Burrs

#### Future Service

Outside of warranty, be it for maintenance or repair services, SCG can help you find a repair center that can serve your needs. Most often, this is the same company as the initial installer. However, sometimes companies change their services or a repair center may be closer to you. Once your equipment is outside of the warranty period, coordination of services will be directly with that repair center. The repair center that is closest to you at this time is:

COMPANY, CITY, CONTACT

#### Maintenance

It is very important to ensure that proper maintenance is performed on all coffee equipment on a regular basis. The regularity of these processes will vary depending on machine use and condition. Warranty service does not cover maintenance or issues caused by inappropriate or infrequent maintenance to the machine. Maintenance includes, but is not limited to: Back-flushing, cleaning steam wands or milk frothing components, grinder/burr cleaning, and descaling.

Softened water is a very important component in machine operation. A filtration system that includes a softening component is often recommended to ensure that the water entering an espresso or coffee machine has a low mineral content, reducing scale buildup. The appropriate amount of softening must be determined at the site, by using water hardness testing to determine not only the hardness of the water entering into the building but, after the filtration system, ensuring that it is low enough to provide little to no buildup. Refer to the manufacturers recommended specifications of water quality. The regular changing of the filter, including proper preparation of the filter before installation is part of normal maintenance to reduce scale buildup.

#### Agreement

The above information has been provided for the equipment provided in the quote that I will be purchasing. I agree to the terms set forth in this document including order completion, returns and warranty coverage and process.
